

# FactSet Mobile RMS

When leveraged correctly, internal research can help to inform critical decisions that improve portfolio performance. Tap into your team's valuable research from the road with FactSet Mobile RMS. Access up-to-date notes and ideas to stay up to speed when the need to capture and review research extends far beyond firm doors.

## Access RMS from Any Browser

Log into the secure FactSet RMS site to access research and data instantly and securely in your browser anywhere you have internet access. Create new research and collaborate on existing research, and receive real-time updates from the RMS database to reconcile changes made by others.

## Connect via the Desktop Application

Provide remote users with secure access to your firm's RMS. FactSet supports major vendors for virtual client solutions, and with VPN, remote users can connect safely to the central database. The app can also be run securely via a local HTTPS certificate back to the central server.

## Create and Collaborate on Research while Offline

Use the FactSet RMS iOS app to assist with offline access. Search your RMS database by keyword, symbol, date range, category, or analyst, select the desired research, and download it to your iOS device. Create saved profiles to automatically synchronize research that was saved online to your device. Use the app to access custom fields and entry forms, and easily import, view, and download documents from other apps, Adobe Acrobat, and Microsoft Office.

## Protect Research with Enhanced Mobile Security

FactSet RMS integrates with third-party security vendors to deliver increased app security and allow your firm to implement bring-your-own-device programs with ease. Safeguard your firm's research with features including secure employee log-ins and sophisticated encryption. Gain the ability to remotely wipe lost and stolen devices, define who can access particular data, and disable sharing functions to avoid opening sensitive data in external applications.
